class `trelloRadar.AuthDialog` (*API_key=""*)

A class to present an authorization dialog to the user. If *API_key* is not given an API key and token are looked for, otherwise only a token.

Parameters *API_key* – an Trello API key, default *None*

Returns an *AuthDialog* object

class `trelloRadar.TrelloRadarApp`

The main application class

Returns a *TrelloRadarApp* object

clear_search (**args*)

Resets the previous search list to [*'@me'*]

Returns *None*

get_API_key ()

Launches an *AuthDialog* instance to retrieve the API key and token

Returns *None*

get_config ()

Reads the config file

Returns *None*

get_token ()

Launches an *AuthDialog* instance to retrieve a token

Returns *None*

link_tree (*labels*)

Opens the url associated with the tree selection if any.

Returns *None*

search_cards (*query_string, cards_limit='1000'*)

Search Trello for cards matching *query_string*.

Parameters

- **query_string** – a search query
- **cards_limit** – max. number of cards returned (default *1000*)

Returns a list of the cards found

send_querystring ()

Records the search query and shows results

Returns *None*

setup_gui ()

Prepares the GUI

Returns *None*

show_data (*query_string, sorting*)

Shows the cards matching *query_string* in a tree view.

Parameters *query_string* – a search query

Returns *None*

validate_credentials ()

Attempts a connection to Trello with the credentials present. If connection is refused, gets new credentials.

Returns *None*
